

*Q. Show me how you would check that the horn is working (off road only).*

*A. Check is carried out by pressing the horn control. You could mention that it would be wise to look around for anyone who might be startled by the horn before operating it.*

*You might also mention that a car horn should not be operated when stationary on the road or between the hours of 11:30pm and 7:00am in a built-up area apart from in cases of actual danger.*

Press in either place to operate the horn
